In LabVIEW, you build a user interface, or front panel, with controls and indicators. Controls are knobs, push buttons, dials, and other input mechanisms. Indicators are graphs, LEDs, and other output displays. After you build the front panel, you add code using VIs and structures to control the front panel objects.

One of the major benefits of coding in LabVIEW is that provides built-in libraries of controls and indicators. Because LabVIEW was designed with engineers and scientists in mind, this library includes context-specific controls such as knobs, dials, and switches along with indicators such as meters, gauges, and thermometers.
