The real exponential function  $e^z$  can be characterized in a variety of equivalent ways. It is commonly defined by the following power series:  $e^z = 1 + z + \frac{z^2}{2!} + \frac{z^3}{3!} + \dots$  Since the radius of convergence of this power series is infinite, this definition is, in fact, applicable to all complex numbers  $z \in \mathbb{C}$  (see § Complex plane for the extension of  $e^z$  to the complex plane).
