Studies performed at the state or national level fall far short of establishing a spatial link. It is likely that state-level analyses could attribute the efficiency gains experienced by a business in one part of the state to an Interstate highway located in another part of the state. The problem is even more acute for national-level studies.

Although Mount Rainier has not produced a significant eruption in the past 500 years, it is potentially the most dangerous volcano in the Cascade Range because of its great height, frequent earthquakes, active hydrothermal system, and extensive glacier mantle. Mount Rainier has 26 glaciers containing more than five times as much snow and ice as all the other Cascade volcanoes combined.

Exposing children to the natural world must be a main goal of teaching science, according to the National Standards of Science Education established in 1996 by the National Research Council. And several studies have found that children who spend time outdoors and in nature are much more likely to be well-rounded and academically focused.
