Explanation: Both masses have gravity pulling down on them and (a common) tension pulling up. Since this is a closed system, we must take a common direction along the string as positive, and the acceleration to be common to both masses.

When looking at
average acceleration,
we will always consider
two points in time. So
we will take arbitrary
points A and B along
the path, in which the
car travels through A
to B. We will assume
that at point A 10
